

Additional Coding Task Description

Task 3: Social Media Sharing: Add a Facebook Share button next to each product. When clicked, this button should open the Facebook share page, allowing users to share the product on their feed. The extension includes code to inject the Facebook Share button into each product. However, the button is not displayed due to client-side issues. The steps to be followed are:

- The API and host permissions are correctly configured for the extension (in the manifest).
- The injected resources are correctly loaded. (check console and the manifest)
- The injected script executes without any issues. (check console to identify the issue)
